

A NEW PHYSICAL FORCE

KEELY, THE "MOTOR" MAN, CLAIMS A WONDERFUL DISCOVERY.

He Gives an Exhibition of "Vibratory Sympathy" Before Scientists, and Succeeds in Convincing Them—The Learned Professors Astonished.

PHILADELPHIA, April 7.—Keely, the well-known "motor" man, yesterday afternoon succeeded in convincing Professor Leidy of the University of Pennsylvania and Professor James M. Wilson, author of "Experimental Philosophy," that he was the discoverer of a new and wonderful physical force. The machine shown was a cupboard about thirty inches high, on which stood a cylinder of wood, to which were attached a series of concentric circles of upright tubes one-half inch in diameter, also of the same metal, surrounded at its base with a series of graduated horizontal rods, solid and evidently of some resonant metal, and capped by a bell-shaped metal cup, in which appeared to be several tuning forks about four inches long, set parallel to each other. The cupboard door was open. Inside it appeared a curious-looking harp and a glass ball, to which Keely put his ear every now and then to see whether he had hit the proper "sympathetic chord" on the resonant rods or on the harp-like instrument.

Keely took a common twine string out of his pocket, wound it around a little brass spindle in front of the cylinder on top of the cupboard, jerked the loose end as a boy would spin a top and set the spindle whirling very rapidly.

He then attached a metallic wire, which he said was platinum and silver, and which was about as big as a small knitting-needle, to a small aperture in the cylinder. The wire which he attached belonged there. The wire was about three feet long. He attached the other end of the wire to what looked like a five-pound copper weight on a chain near by, and on this he put a little metal disc, in which he laid a magnetic needle.

All this time the spindle he had spun with his twine string was revolving at a tremendous speed. The wire, in a big chair by the cupboard and began striking the strings of the harp, and tentatively seeking with the other hand a responsive chord among the resonant rods on top of the cupboard. When what he called "the wire" was touched on both rod and harp-string the magnetic needle gave a shiver, distinctly visible to everybody, and began slowly to revolve from left to right. In a half minute it was going so fast as to be almost invisible. Keely didn't go nearer to it, but sat by the cupboard with his hands in his pockets. The spindle revolved all the while, and the echoes of the note came from the harp.

Keely then pointed out two glass jars, such as chemists use, on a table near by. The jars were of the same size, about forty inches high and ten inches in diameter. They were filled with what was said to be and which smelled and tasted like Schuyllkill water. In the bottom of one jar lay a copper globe, cut in half, to show. Keely said, just what it was, and filled in each hollow half with water. The other jar were three brass balls of different sizes. The copper globe and balls were weighed by Dr. Leidy and found to kick the beam at five pounds and six ounces. The brass balls and eggs were egg-shaped—weighed less.

Keely fastened another "platinum silver wire" to the cylinder on the cupboard, detached the harp string from the magnetic needle disc. Then he fastened the loose ends of both wires into the metal caps of the cylinders. Again he spun the wire as he had used before. Again with his finger he touched the joints of the two fingers of his right hand as he did with the harp—he heaved the "harp" in the cupboard and the resonant bars on top of it.

The search for the magnetic force continued on the "harp" and the resonant rods. A deep, clear note resounded from both at the same time, and at the instant it broke on the ear the heavy copper globe quivered and lay on the bottom of the water, rolled over and over, and as it rolled, it struck the bottom of the jar, floated, at first slowly and then more swiftly and with more force, to the top of the jar, and stuck where it impinged with an audible concussion.

Turning to the other jar, Mr. Keely again tried to strike the chord desired to carry his positive current of force to cause the three brass balls at the bottom of the water.

Finally a note was struck which sent a sort of shiver through one of the balls, the smallest. It slowly mounted through the water, and lay on the top. The "negative current," Mr. Keely said, was turned on and it descended. A difference chord was struck, and the same ball and one of the others heaved and came to the surface again. There they remained for a moment, and then was made to rise the biggest of the three. After some difficulty that one, too, was forced to the top. A change of action followed, and all three as far as the eye could see, rose to the top of the jar, where they were stopped.

The last experiment performed was what was announced as being the propagation and application of "the force" through the atmosphere from one room to another without other medium of conveyance than a silk cord. The cord into the little back shop, whose existence until then was unsuspected, was now opened and a silk cord passed from the transmitter to a large bronze globe mounted on an axis horizontally. The other end of the cord was not fastened to the globe, but to a slender bar of steel supported on uprights near it. A piece of plate-glass an inch thick was put between the end of the resonant steel bar and the globe. A similar piece of glass was put between the wall and the other end of the bar. Glass plates were also put under the uprights which supported the axis of the globe.

Keely then took a harmonica in his hands, and allowing the silk cord from the "transmitter" to pass over the harmonica in contact with it, began to sound notes on it. When "the sympathetic chord," as he said, was struck, "the vibratory force," he declared, was conveyed along the silk cord. The bronze globe, which was about 14 inches in diameter, began to revolve about its axis. The faster Keely played the faster the globe whirled.

"Some day," said Dr. Leidy, "I suppose a young lady will be able to play on the piano and set her father's hair to gridding. I see no possible source of deception. This demonstration is wonderful. There is no explanation of the effect thus produced except by a vibratory force, such as Keely assigns as the cause."

The lady spoke with an air of conviction. "You may announce to the world, on my authority, that John E. W. Keely has discovered a new and wonderful force."

EASTER ANTHEMS.

Celebrating the Close of the Lenten Season in the Churches.

Everyone went to church yesterday, and Easter was more generally observed than it has ever been before in this city. The various churches were crowded with the wealth and beauty of the city and the gay toilets of the ladies lent an additional attractiveness to elaborate floral decorations which characterized the release from the long penitential Lenten season.

Special music programmes were arranged in all the churches, and especially in those of the Catholic and Episcopal denominations.

At St. Matthew's Church, after the conclusion of the mass, the director of the choir, Professor L. E. Gannon, was presented with a gold medal by the lady members, as a mark of appreciation of his services.

Easter was also elaborately celebrated in the various Sunday schools yesterday, and in the Episcopal churches was made the occasion for the presentation of prizes of merit to the chorists and scholars.

In many of the other Sunday-schools the day was set apart for missionary services, and the Easter offerings netted quite a large sum.

HURRYING TO THE RACES.

David Fleght Charged with Fast Driving on the Benning Road.

David Fleght, charged with fast driving on the Benning road, was taken to the race track yesterday before Judge Miller in the Police Court to-day.

Through the result of his careless driving it is alleged that a cab containing J. R. Thomas and his sister was overturned. Mr. Thomas sustained quite serious injuries.

Fleght, in his own behalf, said that the driver of the cab seemed to be half asleep on the box, and not realize where he was driving. The Judge said that the law was defective, and that he was warranted in charging Fleght with fast driving, although he had undoubtedly driven carelessly and could be reached under the police regulations.

A NEW WIT IN THE HOUSE.

Representative Clunie of California Shines in that Role.

There are several new members of the House who are attracting a great deal of attention, but none more so than Mr. Thomas Jefferson Clunie, who represents the Fifth District of California. Mr. Clunie is a medium-sized man with a smooth, boyish-looking face, and reminds one very much in personal appearance of Representative J. N. Wall of Massachusetts.

The two men, by the way, are great friends, and are often seen together.

The fact which has brought the public eye upon him is that he has succeeded in getting out at the time of purchasing tickets. It should rain on that day then the checks will be good for any game, but if it does not rain the checks are worthless. Each series of checks will be numbered.

He is still with the Kansas City Club.

Jack Crooks, the fine second baseman of the Columbus Club, has been confined to his room for the past two weeks with a serious attack of inflammation of the throat.

It was thought yesterday afternoon that he was dying, but he rallied toward evening, and was resting easier last night.

Tommy Warren has admitted that he had not yet made up his mind as to whether he would accept the offer of the Occidental Club and lost because there was more money in it.

The fight between George Dixon, the colored bantam weight, and Nunc Valente, the Englishman for the championship of the world will take place within two months. The arrangements having been completed.

A Cincinnati dispatch says: Peter Jackson, the prohibition pugilist, made a night of it last night in Over the Top, and then he went on to the other side. It was a very close fight, and he was badly hurt.

There is another one that never was crossed by a bribe.

Clunie's eyes twinkled a second, and he said, putting out his left hand. "But here is the hand that does the business. I have made it the rule of my life never to let my right hand know what my left hand is doing."

In the course of the laugh which followed the water came again to the hand that does the business. I have made it the rule of my life never to let my right hand know what my left hand is doing."

He heaved the "harp" in the cupboard and the resonant bars on top of it.

The search for the magnetic force continued on the "harp" and the resonant rods. A deep, clear note resounded from both at the same time, and at the instant it broke on the ear the heavy copper globe quivered and lay on the bottom of the water, rolled over and over, and as it rolled, it struck the bottom of the jar, floated, at first slowly and then more swiftly and with more force, to the top of the jar, and stuck where it impinged with an audible concussion.

Turning to the other jar, Mr. Keely again tried to strike the chord desired to carry his positive current of force to cause the three brass balls at the bottom of the water.

DIAMOND AND RING.

What Lovers of Sports Find to Talk About—General Notes.

Saturday's game between the local team and Abner Powell's team from Hamilton was a decidedly interesting one and the home team won through its superior batting.

The manner in which the members of the local team lined out hits demonstrated that every one of them had his eye on the ball. They also played a sprightly fielding game, and a circus catch by Bader in the last inning was the equal of anything the phenomenal Hoy ever attempted.

To-day the boys will meet the William's College Club and a good game may be expected. Play will begin promptly at 4:30 o'clock. Arrangements have been made for better facilities for transportation to and from the grounds, and beginning to-day the heretofore used position for the grandstand will be taken up.

Powell, the captain of the Hamiltons, in comparing the Washington club with the Baltimore said that the local team was superior to the Orioles in batting and base running, and that the only advantage the latter had was in its excellent field.

Hill, the new third baseman, is beyond question the best man who has ever covered the position for the Washingtons. He goes for everything and has a faculty of keeping a base-runner pinned to the base and not allowing him to get a long lead-off and thus score on an infield hit.

The coaching in Saturday's game was noisy but at the same time amusing. Gleason and Nicholas will make a great team.

The Boston Leaguers will play here to-morrow and Wednesday.

Dundy has signed with the Pittsburg League Club.

Before Pickett gets out of the Kansas City middle he will wish he had never indulged in the double contract business. His case has been presented to the hands of competent critics, and I am willing to have three judges, one to be selected by each of us, and the third to be chosen by those two. Or I will agree to leave it to a vote of the audience.

"I see Miss Raymond does not care to play for money, if any one will donate a building, I am willing to play and allow the proceeds to be given to any charitable institution after deducting the expenses of the game."

MISS GILBERT'S CHALLENGE.

Anxious to Prove Her Accomplishments as a Cornet Virtuoso.

A handsome, black-eyed and petite lady, holding a roll of music, was awaiting her turn to rehearse at Kernan's this morning, and during the interval conversed with a Cornet virtuoso.

The manner in which the members of the local team lined out hits demonstrated that every one of them had his eye on the ball. They also played a sprightly fielding game, and a circus catch by Bader in the last inning was the equal of anything the phenomenal Hoy ever attempted.

To-day the boys will meet the William's College Club and a good game may be expected. Play will begin promptly at 4:30 o'clock. THE CHAINS OF ST. PETERSBURG.

A United States Minister Called to Account by the Czar.

The dinner tendered Mr. Charles Emory Smith in Philadelphia on Monday evening when one of the prominent journalists present averred from his personal knowledge of the guest of honor that he would, at the expiration of his mission to this country as good an American as he left it, recalls an incident in the career of one of his predecessors, which seems heretofore to have been kept very quiet.

At the outset of an administration the gentleman in question, a tall, fine-looking fellow, dressed in a suit of black, with a white shirt and a white necktie, was seated at a table in the city of St. Petersburg, after a social ovation from his friends in this city. For a time a very brief time, by the way—nothing was heard from him save the most glowing accounts of his life and doings in the Czar's dominions. Then, suddenly, without warning, he loomed up again on the Washington horizon. Though at first avowedly here only on a visit, it soon became apparent that there was no intention of returning to the land of ice and snow. Finally, the Extraordinary and Minister Plenipotentiary gave out to society by word of mouth that he was being duly honored, that the rigorous climate had been an unpleasant reason for his departure, but that he had been so interested in the life of his native land, that he was now returning to his native land. This explanation was highly appreciated by the society, and the Minister's name would have been extended down to posterity as that of the patriotic American which the present circumstances of the world had not been so interesting rumors as to the real reason of the departure from Russia, which began to be wafted from over the seas.

According to the social lion, shortly after his arrival in St. Petersburg, he was associated with the company of a brilliantly handsome woman, who, for certain reasons, was not eligible to appear at court. This fact, however, to have secured the fair one's ambition to overcome all obstacles to the achievement of her object that she finally persuaded the Czar to grant her a court ball, and to introduce her to the Czar.

It is said that the Minister was successful in his mission, and that he was progressing in the most favorable manner, until, just as he was about to leave, he was informed that the Czar had been informed of his presence at the court ball, and that he was being summoned to appear before the Czar.

The Minister was summoned to appear before the Czar, and was informed that he was being summoned to appear before the Czar.

The Minister was summoned to appear before the Czar, and was informed that he was being summoned to appear before the Czar.

The Minister was summoned to appear before the Czar, and was informed that he was being summoned to appear before the Czar.
